

CONNECT WITH YOUR BUSINESS NETWORK AND TRADING PARTNERS

SAP® BUSINESS ONE INTEGRATION FOR SAP NetWeaver®

SAP offers integration for the SAP® Business One application in your affiliates with the SAP applications at your headquarters. This allows you to smoothly connect your entire business network while improving visibility and lowering costs.

Enhanced Ecosystem Management **Cost-Effective Deployment**

As organizations expand, business processes typically become more complex. Your subsidiaries, branch offices, or manufacturing sites often end up running point solutions that solve immediate problems but are incompatible with each other and with the SAP® applications you run at headquarters. As the number of local point solutions grows, the infrastructure of your ecosystem becomes more complex, raising operational costs and decreasing IT stability.

The SAP Business One application can help you address these issues with minimal effort and risk. SAP Business One not only provides the comprehensive functionality your subsidiaries need, but also can integrate with your other SAP applications at your headquarters. With SAP Business One integration for the SAP NetWeaver® technology platform, you can create a unified environment across the business network.

Comprehensive Functionality

SAP Business One is a business management solution designed especially for small businesses. By integrating sales, marketing, purchasing, inventory management, and finance functions, it lets your smaller subsidiaries manage operations in one unified application. SAP Business One thus brings the expertise of SAP software to even the smallest members of your business network.

As a native SAP solution, SAP Business One integrates quickly and affordably with your SAP applications. The integration option is simple yet powerful, providing preconfigured content to address most common challenges.

Software for SAP Business One integration for SAP NetWeaver is scalable to accommodate changing requirements but can fit on a USB drive and run on a laptop. It can be implemented in a short time without major technical skills. At the same time, robust integration software and powerful management tools reduce system maintenance costs. Adherence to global integration standards and compatibility with the latest Internet technologies ensure optimum value for your investment.

Benefiting from Integration

Integrating subsidiary SAP Business One applications with your other SAP applications helps you:

- Reduce total cost of ownership
- Improve profitability
- Increase productivity
- Improve decision support

Summary

As businesses grow both organically and by acquisition, they need an easy way to harmonize the business processes that run at headquarters with those that run in their affiliates and subsidiaries. The SAP® Business One application does just that. It provides a powerful and unified business management solution for your smaller subsidiaries and can connect with the SAP applications running at your headquarters using the SAP Business One integration for SAP NetWeaver®.

Business Challenges

- Enhance operational efficiency across the enterprise
- Integrate subsidiary operations with SAP applications running at headquarters
- Reduce IT complexity and integration costs
- Improve transparency company-wide for stronger decision support

Supported Business Processes and Software Functions

- **End-to-end processing** – Take advantage of the power of integration technology to eliminate multiple application interfaces and intervention points
- **Ready-to-use integration content** – Shorten time to integration using preconfigured content, including data transformation rules and routing rules defining interactions between systems
- **Configure and run** – Make it easy for partners to develop integration solutions based on preconfigured content, or create new solutions with built-in step-by-step procedures

Business Benefits

- **Improve operational efficiency and productivity** by means of seamless integration of subsidiary operations
- **Enhance organizational control** through centralized information management and corporate-wide visibility
- **Lower total cost of ownership** by using an affordable, user-friendly solution that reduces the cost of integration and ongoing support
- **Increase profitability** by optimizing sales, marketing, and service functions
- **Meet local needs and regulations** by deploying global best practices
- **Enhance ongoing technical support** through a single point of contact for all your application issues
