OUR DIFFERENTIAL VALUE

auto.sky by Sky.One

Auto.Sky is the ideal solution for taking your ERP to the cloud. Besides allowing the migration of client-server applications of all programming languages and different databases, Auto.Sky guarantees a much more robust security than conventional hosting, according to Sky.One's backup policy.

We take your ERP to the cloud, without having to rewrite a single line of code. This way, your business can count on a platform that manages and orchestrates software environments directly in the cloud, all in a simple and fast way!

Another important point is that, unlike hosting (when the purchase of space in a data center is made, which can also reflect on problems with over-provisioning of machines), we deliver a ready-to-use environment, with charge per user and zero management headaches.

And we know that your digital transformation should not stop there!

In addition to going to the cloud with Auto.Sky, opening your ERP to a world of integrated applications contributes to an innovative, collaborative, and high performance environment. Take the next step in your digital journey with Integra.Sky!

Learn more about Sky.One's differentials below:

Activity	auto.sky	Competitors
Compliance and cybersecurity	The Auto.Sky Platform enables application segregation by company area, according to security and corporate compliance requirements. For example, employees in the sales department cannot access the financial department's applications.	Feature unavailable in competitors
Compliance and cybersecurity	Employee Access Control can also be done by group, area, IP addresses, and time, allowing companies to define more granular rules for access restrictions and reduce overtime costs.	Feature unavailable in competitors
Password Guidelines	Configuration of password rules according to each customer's guidelines.	Since it does not have authentication, no competitor offers this feature
ERP management in the cloud	Cloud ERP management done by specialized professionals with expertise in managing and supporting the infrastructure of more than 300 ERPs in the market.	Few competitors understand the ERPs they are hosting, which delays troubleshooting
Sizing	With 8 years of experience, we are able to correctly size each ERP, optimizing performance and cost. In addition, scaling by user brings more predictability in the growth of your environment.	Our competitors have no scaling and few are experienced in ERPs
Performance	24x7 infrastructure monitoring, looking at all servers for performance, disk, alerts, and security.	It varies from competitor to competitor
Updates	Sky.One has developed a proprietary process for updating applications and operating systems that eliminates maintenance windows and guarantees much more control and security in the activity.	It varies from competitor to competitor
Database management	Management of all types of databases used in ERPs. Continuous monitoring of Sky.One enables proactive problem solving.	Competitors do not talk about continuous DB monitoring
Support	24x7 support in Portuguese, English and Spanish, to solve problems both in access and infrastructure of the ERPs.	It varies from competitor to competitor
Protection against Brute-force attacks	Auto.Sky Defender: Brute-force attack monitoring and mitigation tool and Anti-malware as an extra layer of protection.	Feature unavailable in competitors
Accessibility	Low-bandwidth virtualization that works on any device, from anywhere. 3G connection is enough for the process.	Competitors work with VPNs and Remote Access, which requires much more IT infrastructure and telecommunications resources from customers and users
Public Clouds Usage	Public clouds offer the highest level of security and scalability for applications, and have been Sky.One's choice since 2014.	Private and hybrid clouds have varying levels of security and scalability, tied to the operational and financial capacity of each data center
